3	WAN	WAN 10/100M Ethernet port (with auto crossover support); connect xDSL/Cable modem here.
4	DC12V	Connect DC power adapter here.(DC12V Power)

Connecting Your Router

1. Connect the Router to a **LAN** (Local Area Network) & WAN (Connect to Cable or ADSL modem).

2. Power on the device.

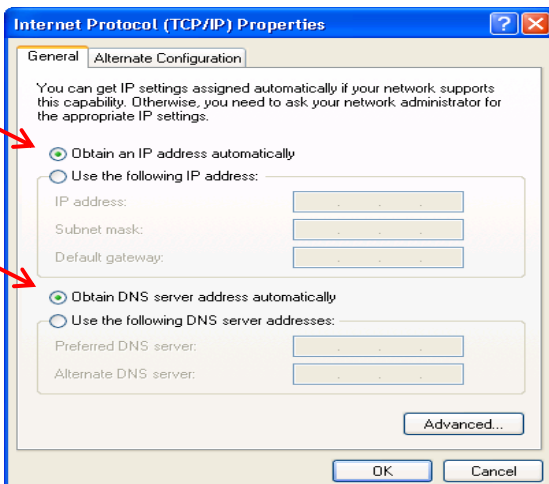

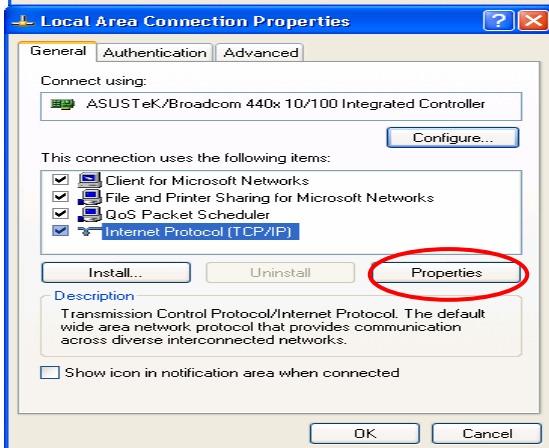

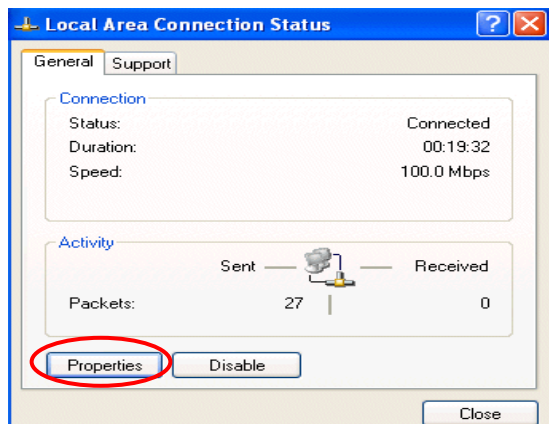

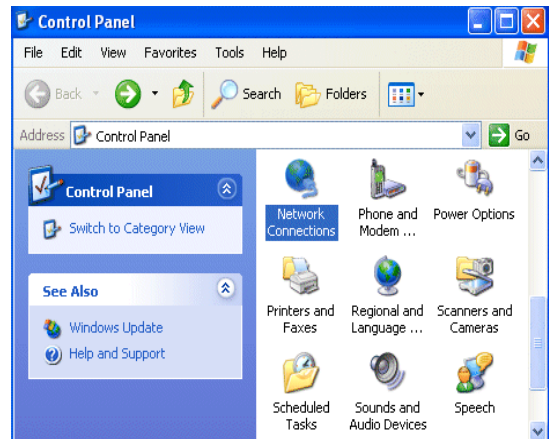

3. Make sure the **Power** LED is light steadily and that the **WAN** and **relevant LAN** LED is light.

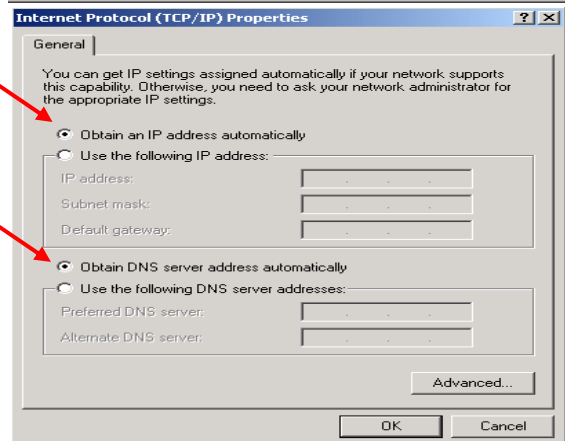

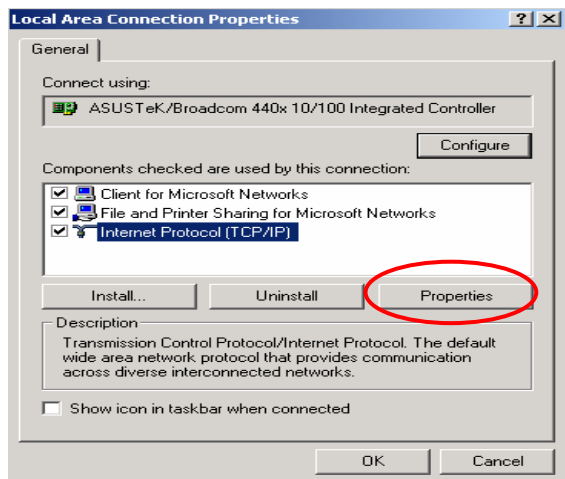

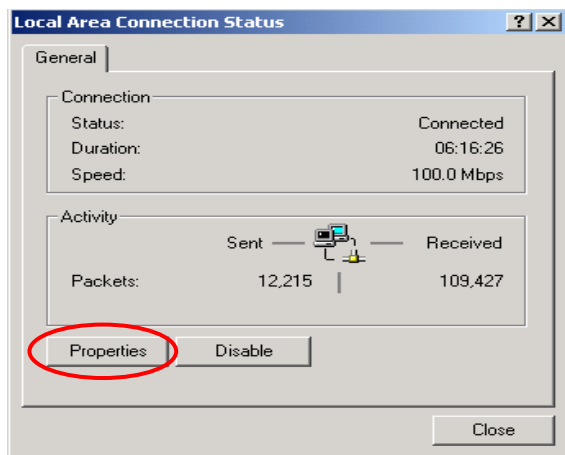

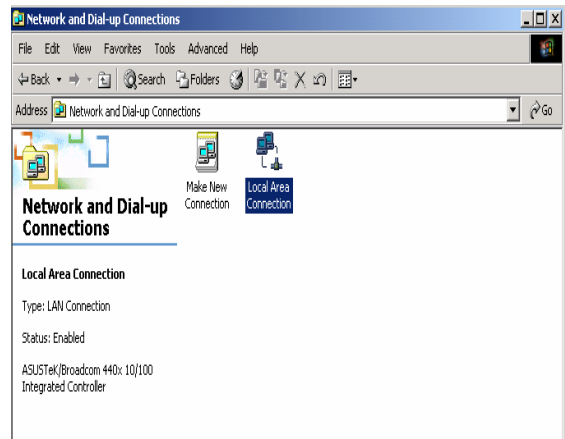

Configuring PC in Windows XP

1. Go to **Start / Control Panel (in Classic View)**. In the Control Panel, double-click on **Network Connections**.
2. Double-click **Local Area Connection**.
3. In the **Local Area Connection Status** window, click **Properties**.
4. Select **Internet Protocol (TCP/IP)** and click **Properties**.
5. Select the **Obtain an IP address automatically** and the **Obtain DNS server address automatically** radio buttons.
6. Click **OK** to finish the configuration.

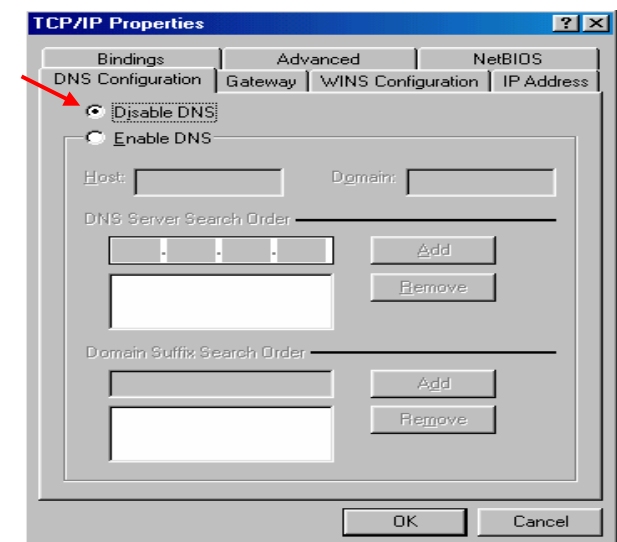

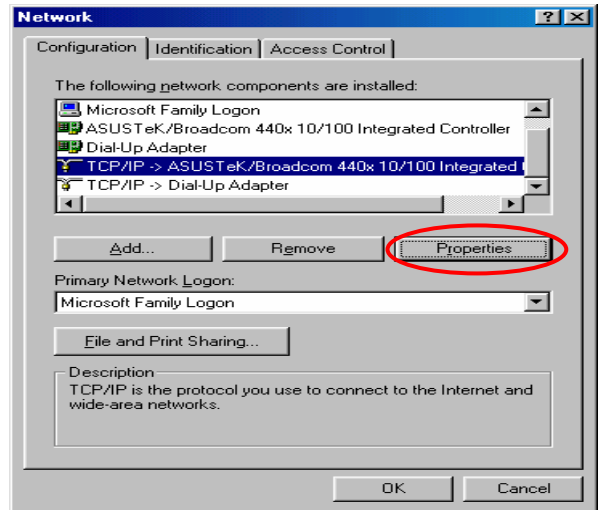

Configuring PC in Windows 2000

1. Go to **Start / Settings / Control Panel**. In the Control Panel, double-click on **Network and Dial-up Connections**.
2. Double-click **Local Area Connection**.
3. In the **Local Area Connection Status** window click **Properties**.
4. Select **Internet Protocol (TCP/IP)** and click **Properties**.
5. Select the **Obtain an IP address automatically** and the **Obtain DNS server address automatically** radio buttons.
6. Click **OK** to finish the configuration.

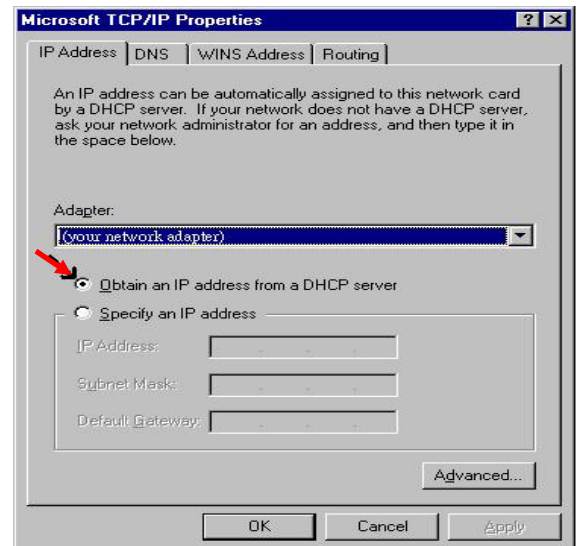

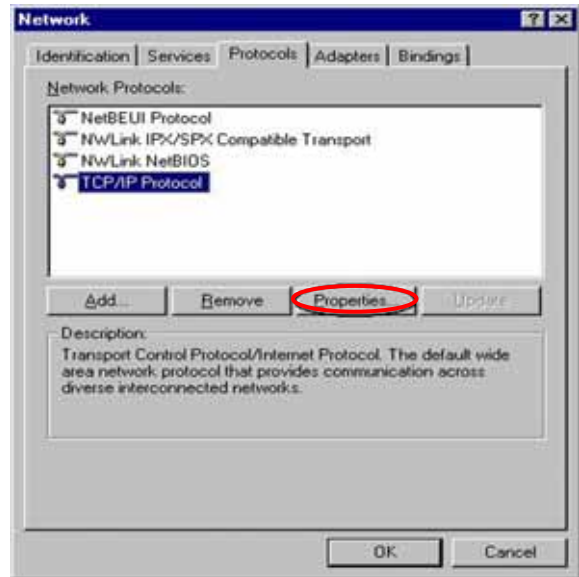

Configuring PC in Windows 98/Me

1. Go to **Start / Settings / Control Panel**. In the Control Panel, double-click on **Network** and choose the **Configuration** tab.
2. Select **TCP/IP -> NE2000 Compatible**, or the name of your Network Interface Card (NIC) in your PC.
3. Select the **Obtain an IP address automatically** radio button.
4. Then select the **DNS Configuration** tab.

Configuring PC in Windows NT4.0

1. Go to **Start / Settings / Control Panel**. In the Control Panel, double-click on **Network** and choose the **Protocols** tab.
2. Select **TCP/IP Protocol** and click **Properties**.
3. Select the **Obtain an IP address from a DHCP server** radio button and click **OK**.

Configuring Your iBusiness Security Gateway Small-Office

To configure this device, you must have IE 5.0 / Netscape 4.5 or above installed

■ Verifying Your Local Network Connection with the Device

To see if this Router is visible on the local network, go to **Start / Run**. In the Run dialog box, type “**ping 192.168.1.254**” then presses **OK**.

A command prompt window will pop out. If your ping is successful which means your local network is able to reach to the device, then the command prompt window will close up automatically.

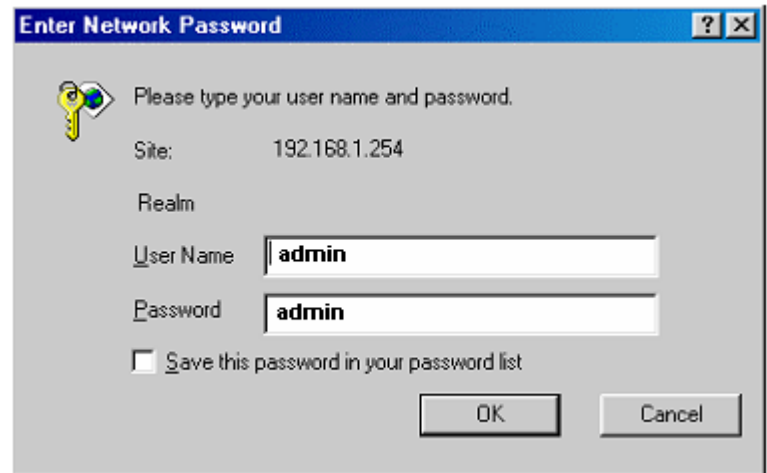

Connection fails, when you see “**Request timed out**” in the command prompt window. You may need to check your set up.

■ Connecting to the Router

Open the web browser and type <http://192.168.1.254> in the browser's address box. This number is the default IP address for this router. Press **Enter**.

A user name and password window will appear. **The default User Name and Password are "admin" and "admin"**. Press **OK** to logon to the router

Enter Network Password

Please type your user name and password.

Site: 192.168.1.254
